

ABSTRACT

A method for producing a worn article of the present invention comprises the steps of successively placing portions of webs **W1**, **W2** on a plurality of pads **3i**; slackening off the webs **W1**, **W2** between the pads **3i** by shortening an interval between the pads **3i**; placing an elastic member on the webs **W1**, **W2** placed on the pads **3i** so that the elastic member extends across a slack portion **Wa** of each of the webs **W1**, **W2** which is slacked off; placing an absorbent body on a non-slack portion **Wp** of the webs **W1**, **W2** on the pads **3i** which is not slacked off; removing the slack of the webs **W1**, **W2** by increasing the interval between the pads; and placing a sheet **S1**, **S2** of a predetermined length on the webs **W1**, **W2**, the slack of which is removed.
